Bajarin, Tim. "Tech Industry's Biggest Concern about Twitter's Future." *Forbes*, 11 Apr. 2023,

www.forbes.com/sites/timbajarin/2023/04/11/tech-industrys-biggest-concern-about-twitters-future/?sh=25f2ca1e620e. Accessed 28 Apr. 2023.

The article analyzes the future of Twitter amid rising concerns about unfairness and heavy-handedness. Twitter is a valuable and trusted news source. Users mainly post ads, cultural information, and political news (Bajarin par. 2). The author considers Twitter the most valuable news source for news-related features, including breaking news and commentaries. The article demonstrates how Elon Musk uses his ownership and bias to punish perceived enemies.

The author believes that Musk's management style and controversial opinions and decisions have not only tarnished his image but also jeopardized Twitter (Bajarin par. 13). Tim Bajarin is a leading industry analyst, consultant, and futurist. He covers consumer technology, personal computers, and other related fields.

The article is significant; it helps gain deeper knowledge and understanding of the inherent concerns of tech leaders and industry analysts about controversial leadership practices and decisions that might cost Twitter. Besides pointing out the failings of Musk, the article has examined his successes too. Musk achieved massive success with Space X, Tesla, and PayPal (Bajarin par. 13). Nonetheless, the article overlooks the context and

basis of Musk's contentious decisions. I think checks and balances would prevent self-seeking company owners from using their power to castigate perceived enemies.
